

HYDROPEAK

WP2 – PhD prosjekt

**Knut Alfredsen, Teklu T. Hailegeorgis, NTNU
Sjur Kolberg, Yisak S. Abdella, SINTEF**

Målet med arbeidet

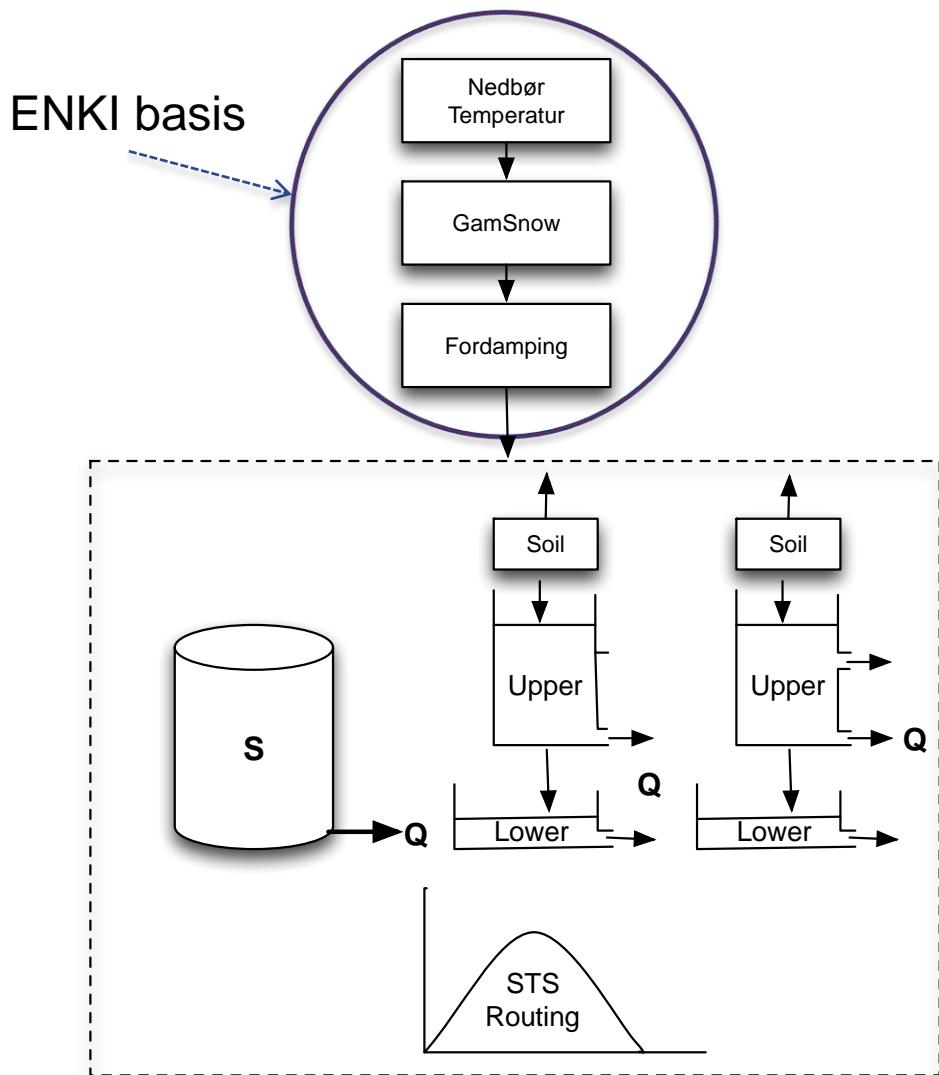

- Utvikle rutiner for å simulere avrenning med kort tidsoppløysing
 - Utprøving av ulike modellar for avrenning
 - Modelloppløysing
 - Krav til data
 - Kalibreringsmetoder
 - Implementasjon i ENKI rammeverket
- Forsøk med både lokal og regional kalibrering og evaluering.
- Regional metode -> avrenning i umålte felt.

- Modulært rammeverk for utvikling av hydrologiske modellar.
- Distribuert modell som koplar hydrologiske simuleringsrutiner og geografiske data.
- Utvikla av SINTEF Energi, Open Source.
- I ferd med å bli klargjort for operativ bruk i eit prosjekt med bla SINTEF, Powel og fleire kraftselskap

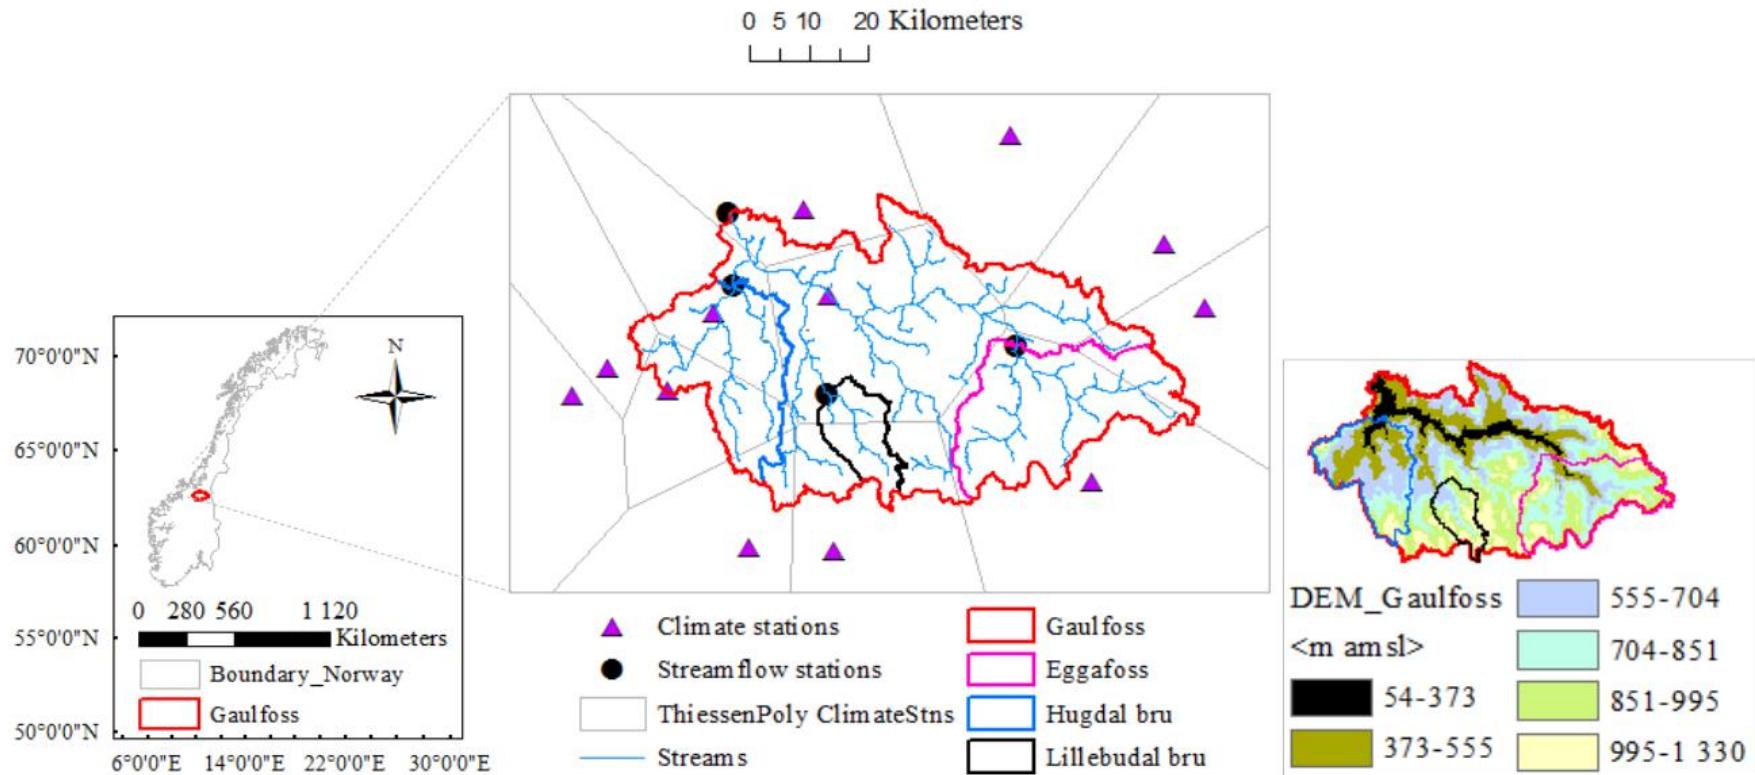

Modellar for korttidsavrenning

- PDM
 - Probability Distributed Model
 - Grid eller delfelt?
- HBV
 - Ulike konfigurasjonar
 - Ulikt tal på parametre
 - Lineær/ulineær
- Kirchener
 - S – Q samanheng

Modelltest – Studieområde

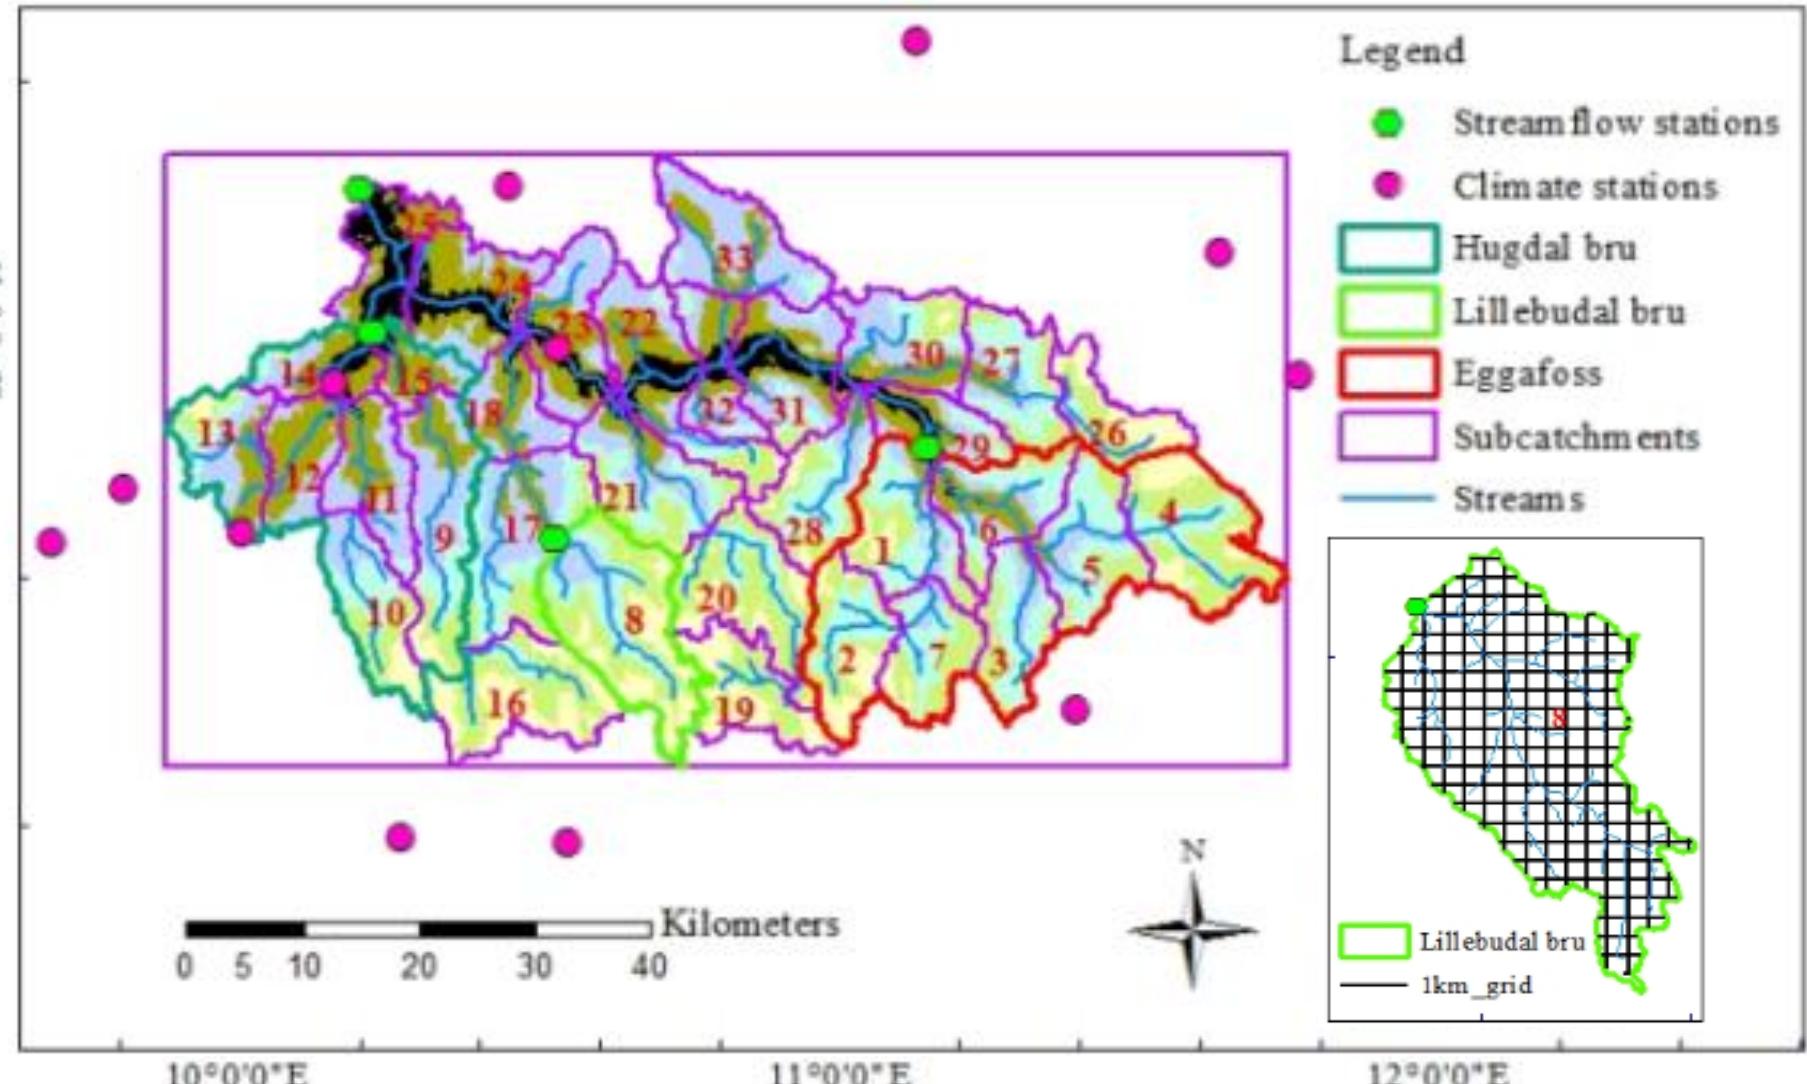

Gaula – Gaulfoss/Hugdal/Eggafoss/Lillebudal

Kalibrering

- Alle oppsett kalibrert på timebasis
- “Split sample” & “proxy basin” metode for evaluering av simulering
- DREAM for automatisk kalibrering
- Ulike mål på kor god kalibereringa er: NSE, NSEln, vassbalanse, parameteranalyse

Kva effekt har oppløysing?

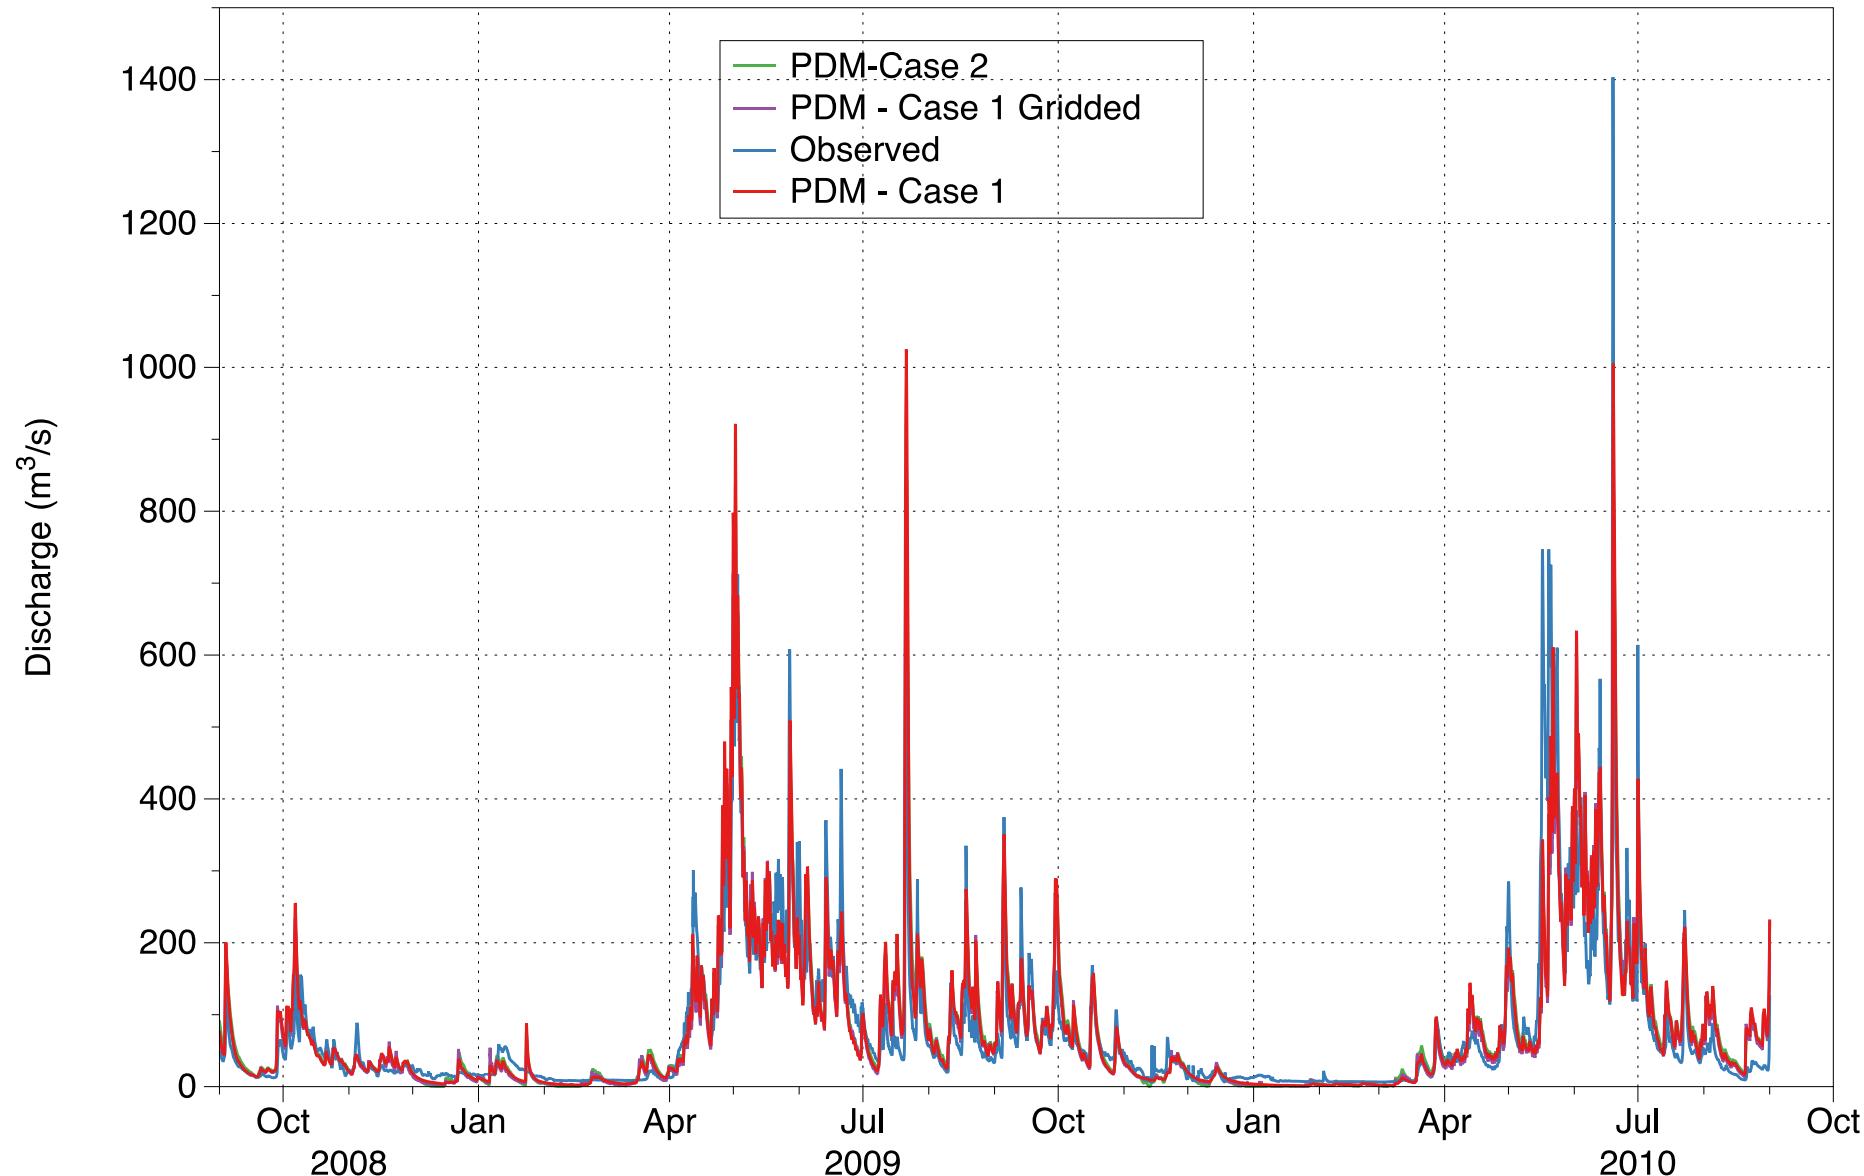

Metoder som är testa i PDM

Scales of representation of spatial heterogeneity and computation or calibration					
Cases	Heterogeneity by a probability distribution	S_{max}	Shape parameter 'b' of the distribution	Runoff generation (response)	STS runoff routing
1	Subcatchment	Catchment (calibrated)	Catchment (calibrated)	Element	Grid
2	Subelement	Element (from topographic gradient)	Element (from topographic gradient)	Element	Grid
3	-	Catchment (calibrated)	-	Element	Grid
1G	Subgrid	Catchment (calibrated)	Catchment (calibrated)	Grid	Grid
2G	Subgrid	Grid (from topographic gradient)	Grid (from topographic gradient)	Grid	Grid
3G	-	Catchment (calibrated)	-	Grid	Grid

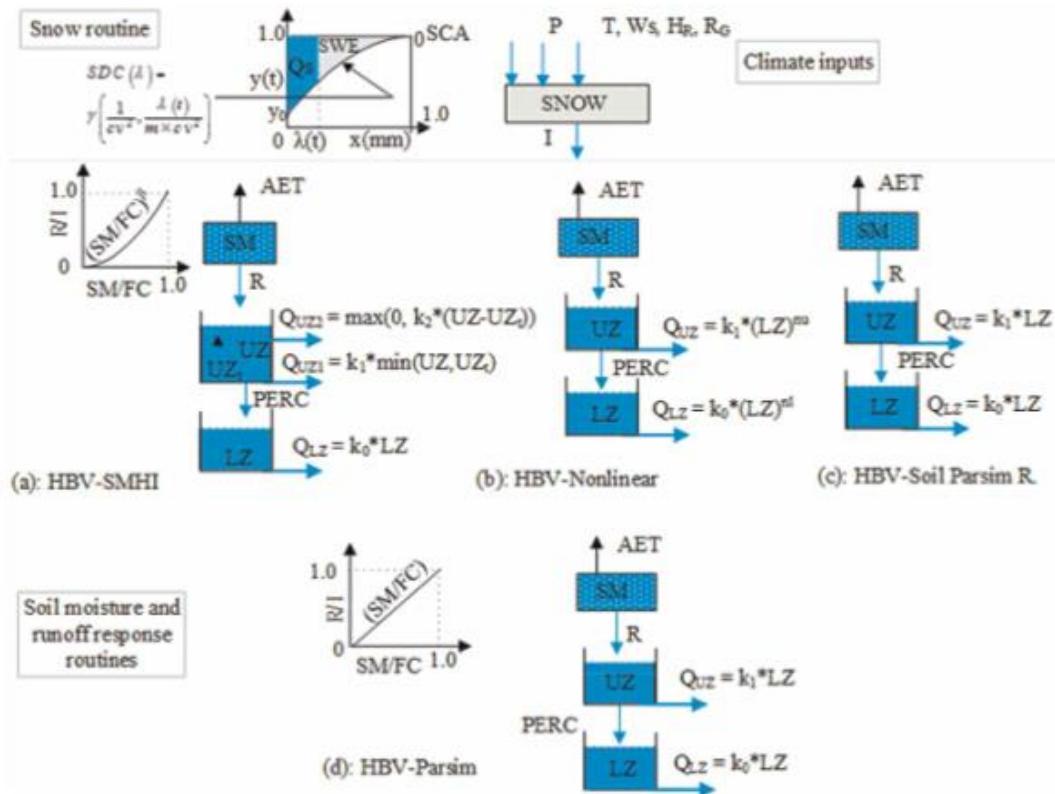

S_{max} : maximum subsurface storage capacity and STS: source-to-sink routing.

Gaulfoss

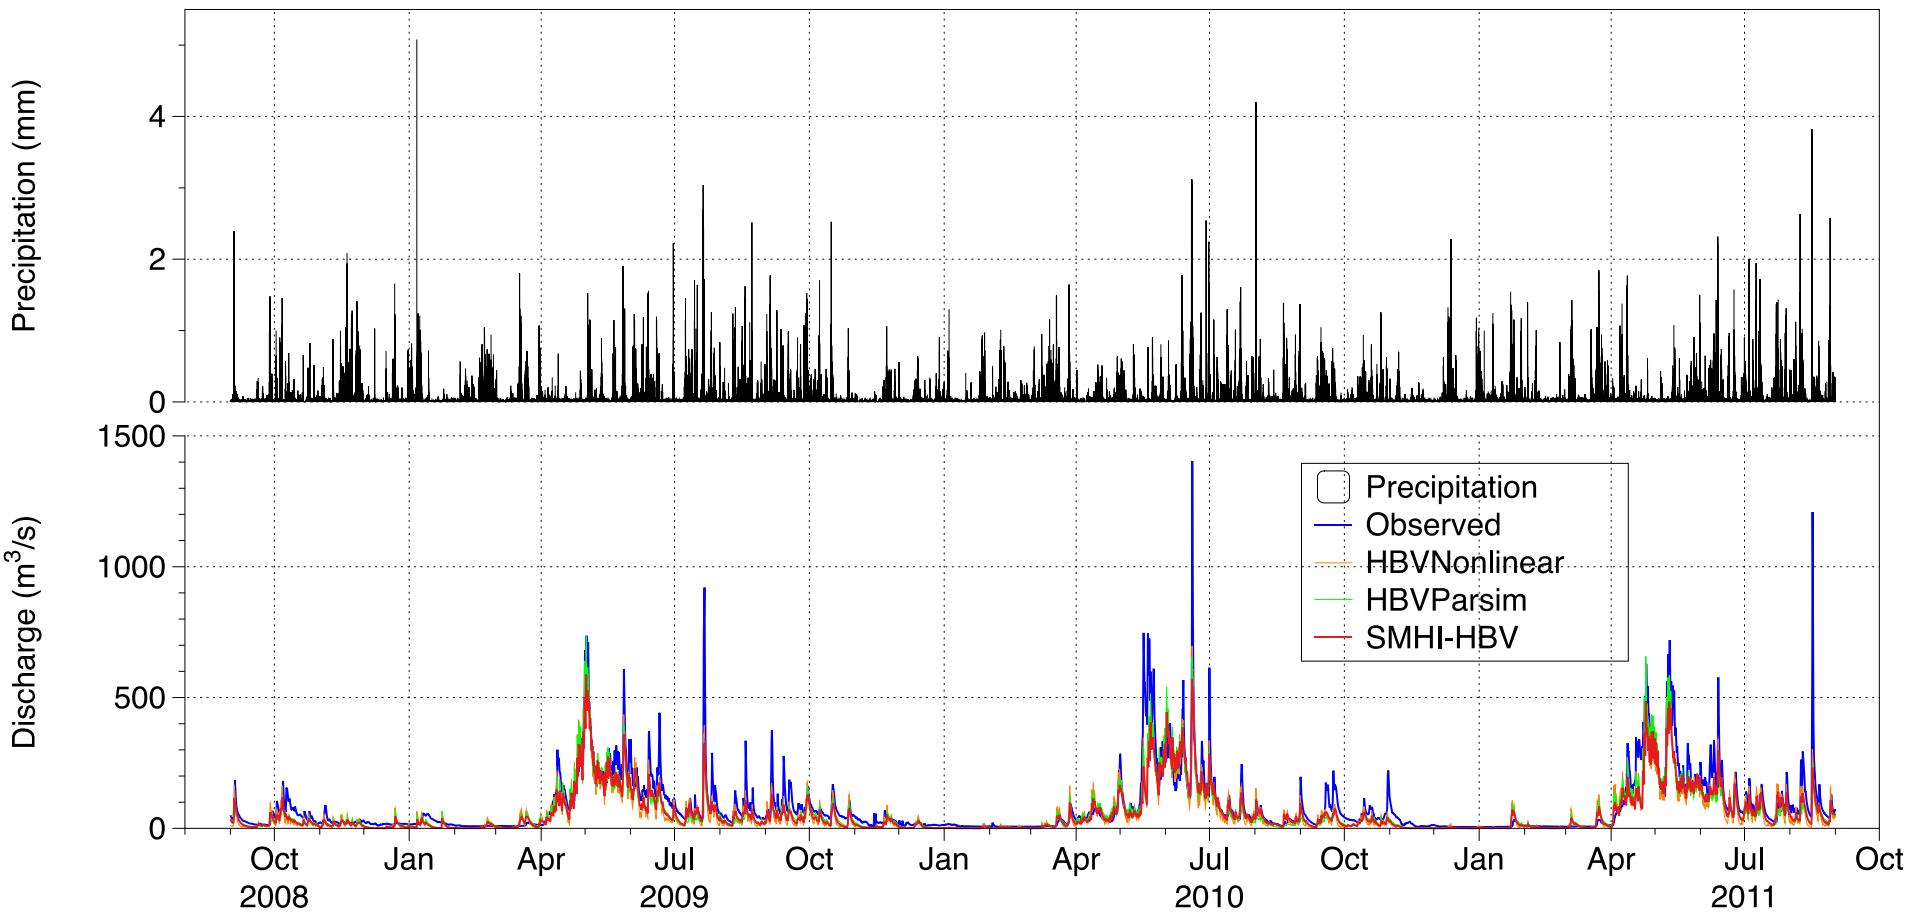

HBV modellen

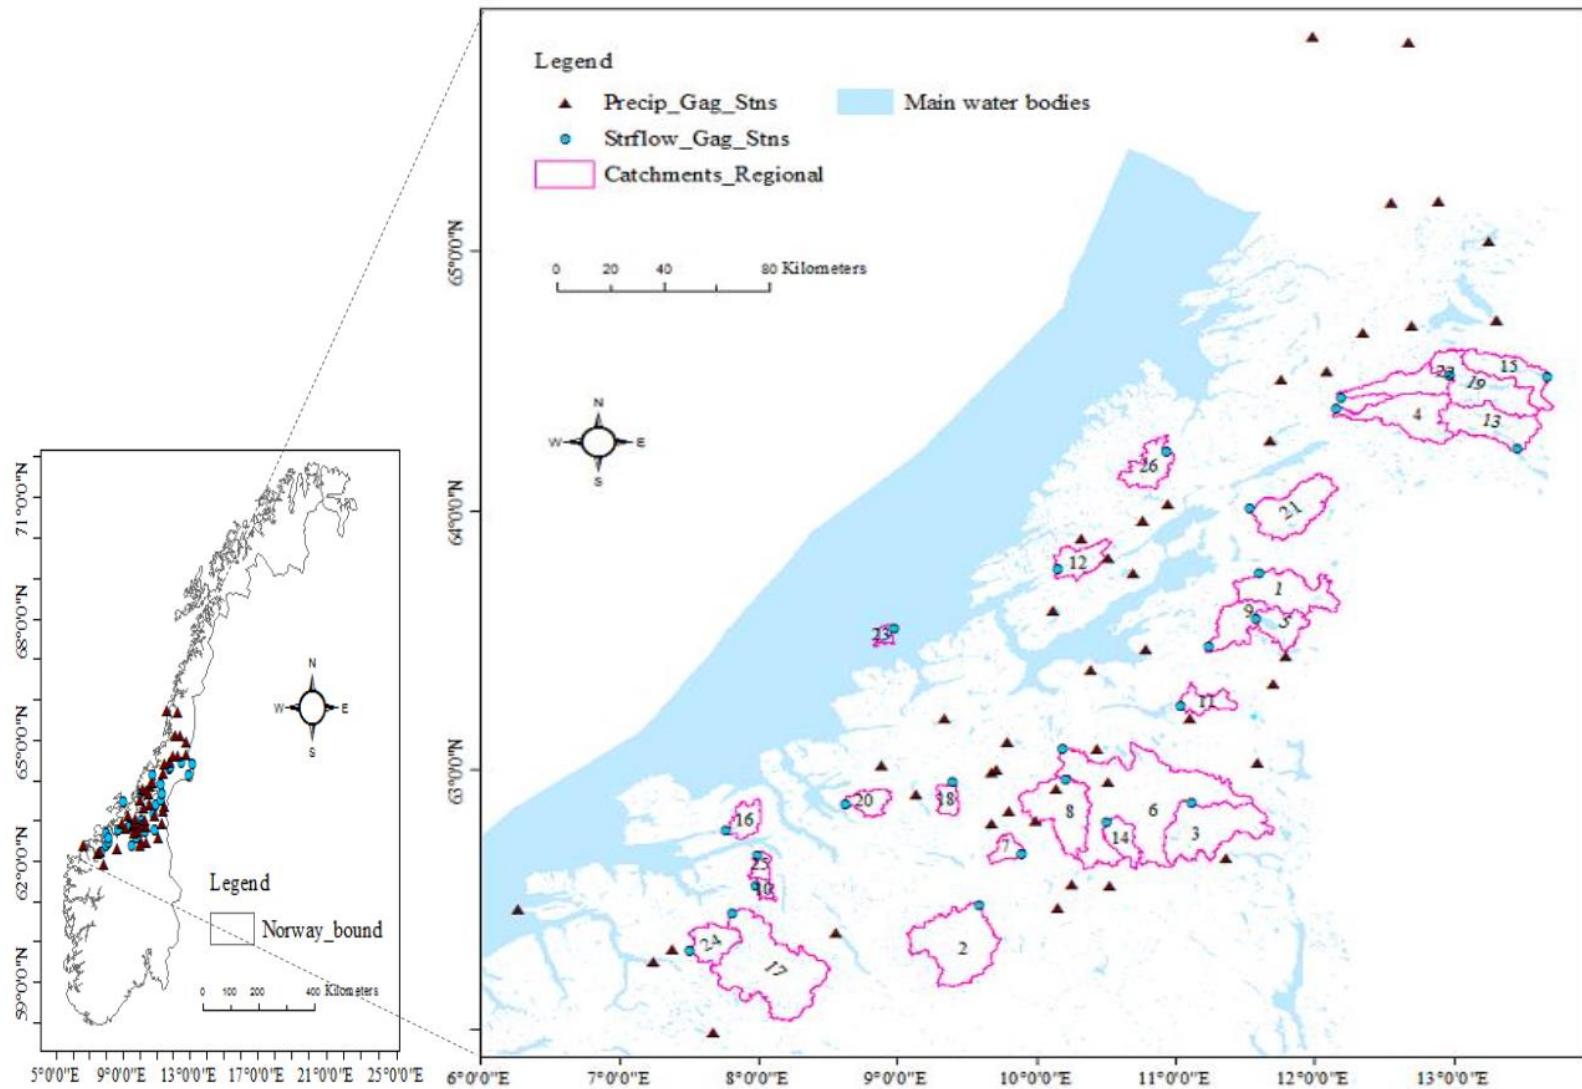

- Kva skjer om vi forenklar modellen?
- Ulike variantar av markvassrutina
- Ulik konfigurasjon av øvre og nedre sone.

HBV Comparison

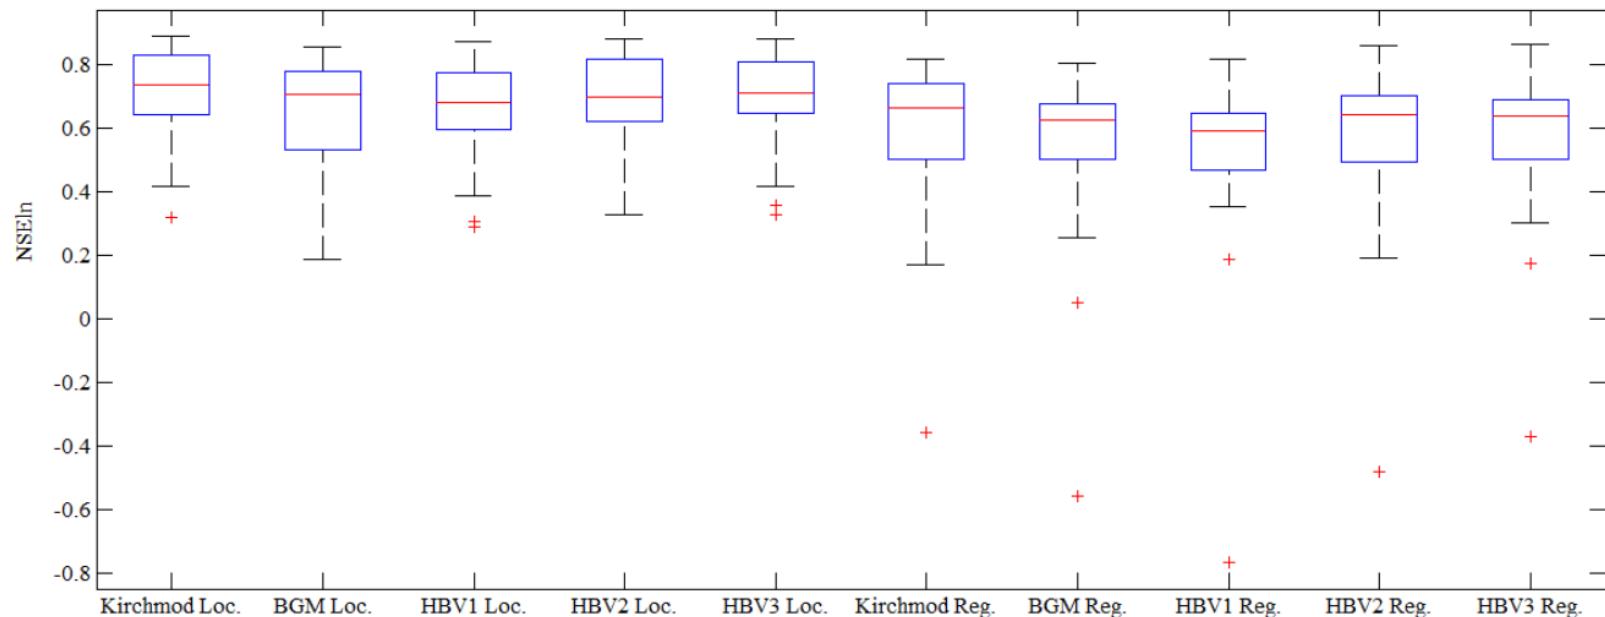

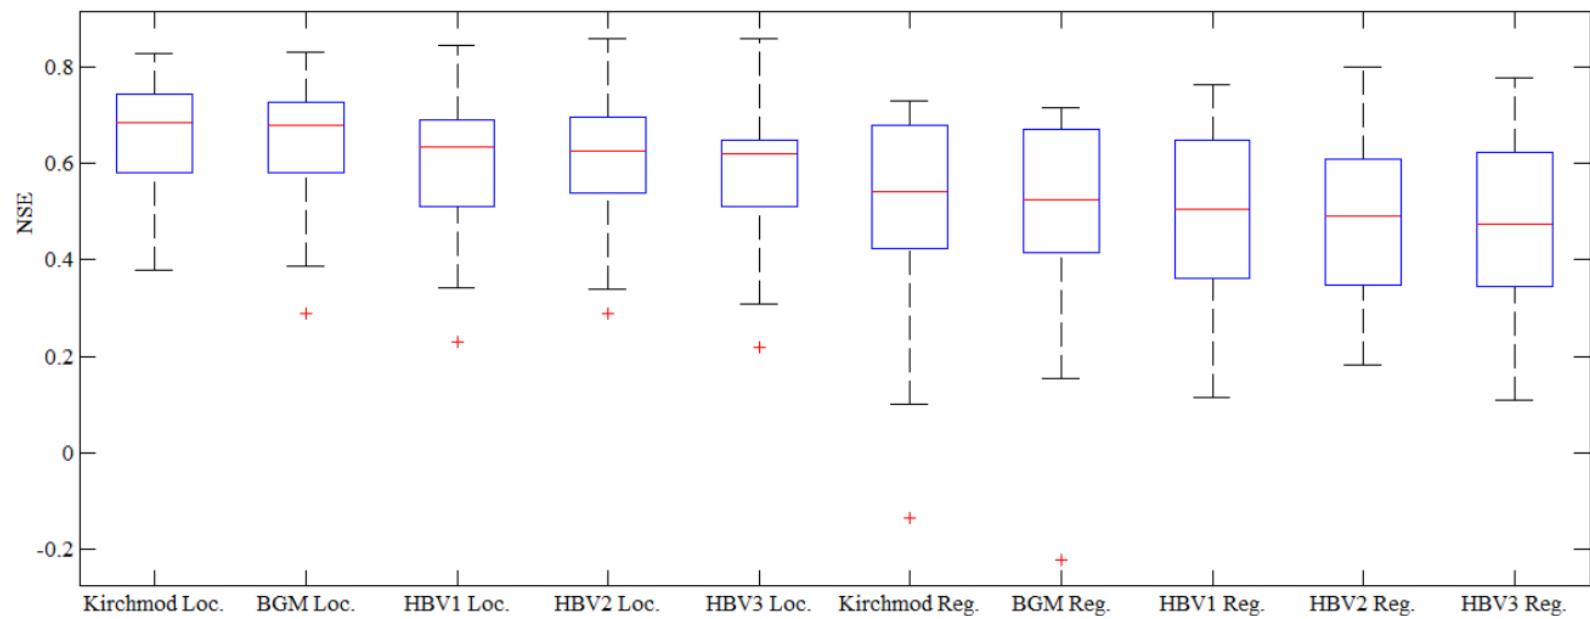

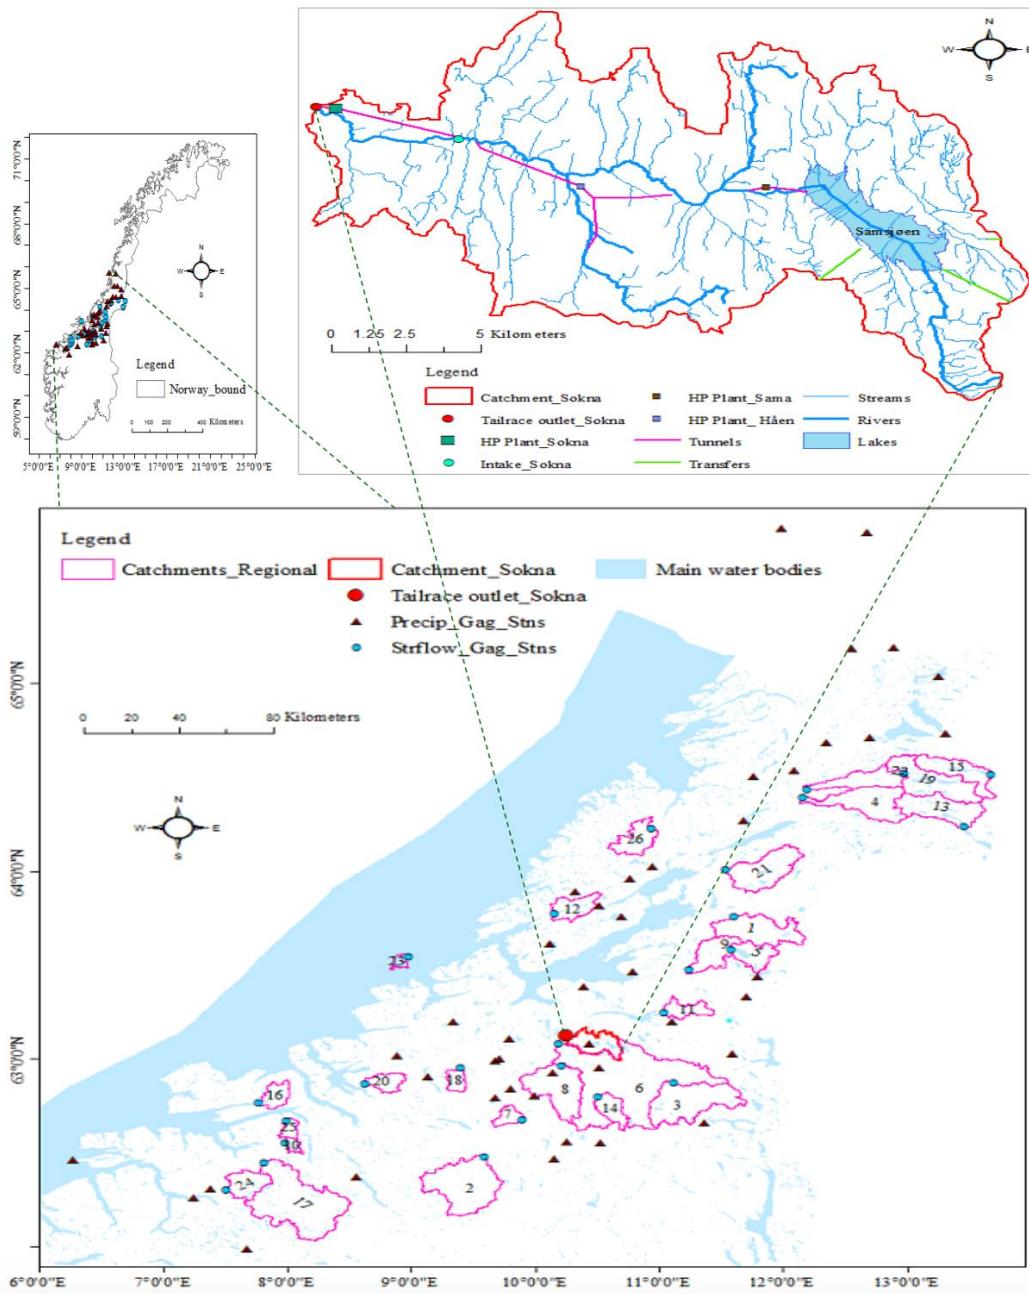

Regional kalibrering

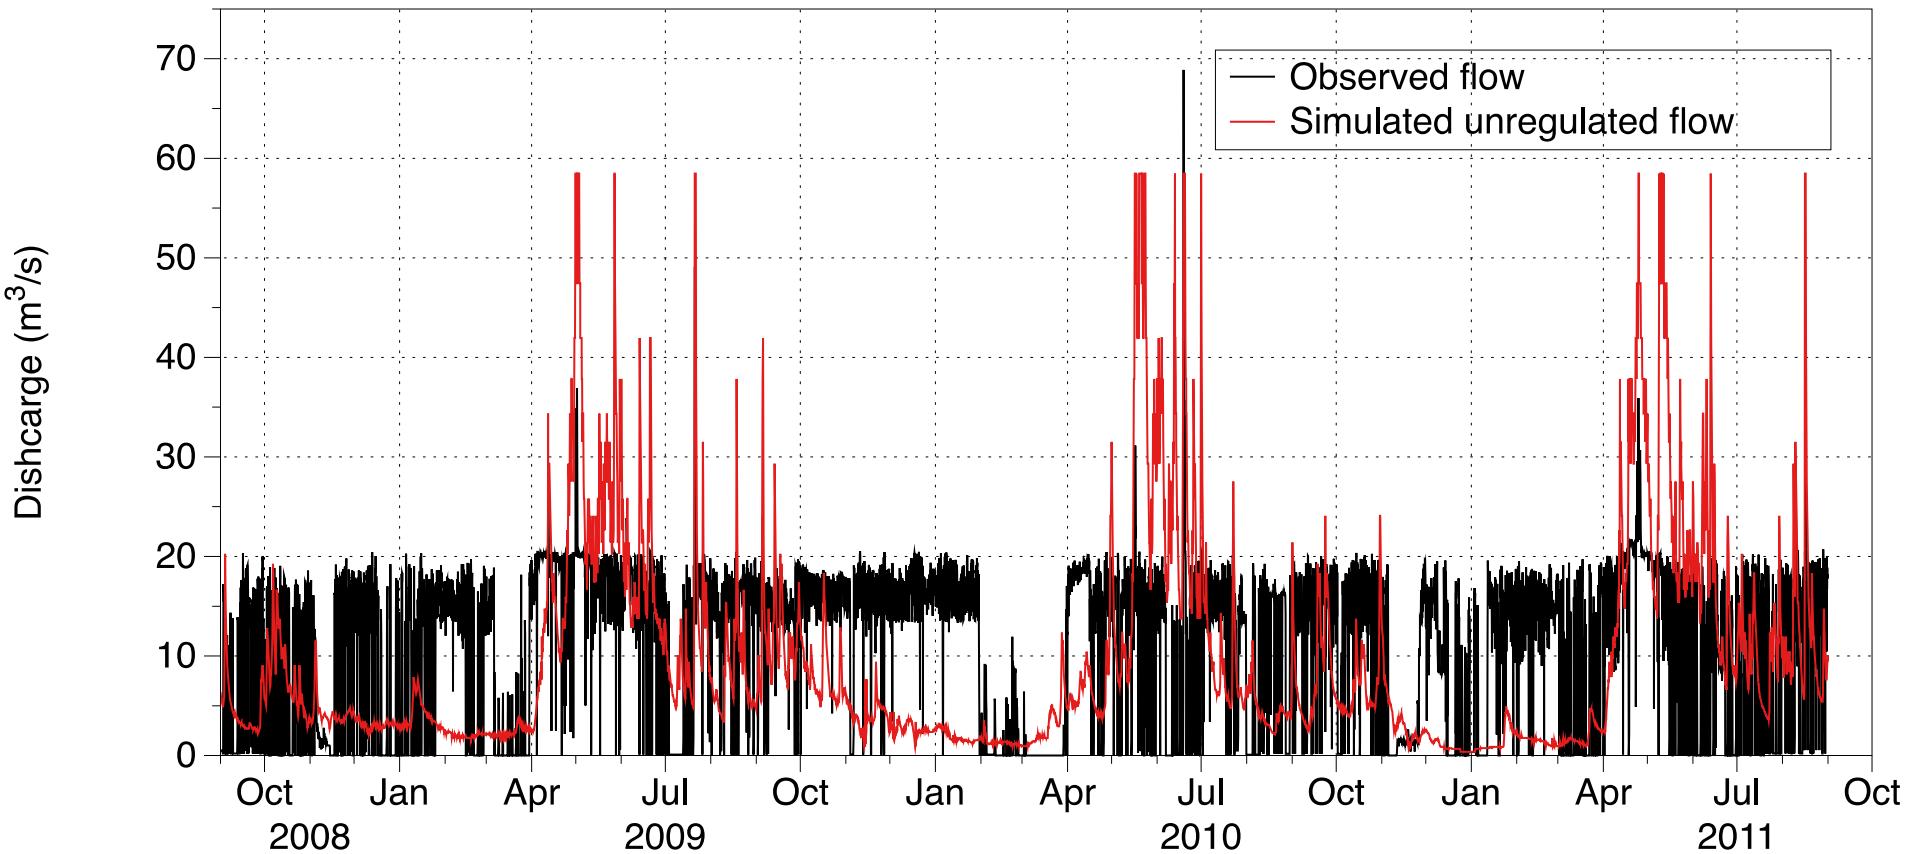

Strategiar

- Samanlikne beste lokale parametersett med regionale parametersett
- Ulike metoder for å finne det regionale settet
 - Maksimalt regionalt vekta gjennomsnitt
 - Median
 - Næraste nabo
 - Fysisk likskap
- Ulike metoder for å generere avrenning
 - HBV, Kirchener

Simulated unregulated flow

Resultat frå prosjektet

- Artiklar om erfaringane som er gjort med timesimulering.
- Programmodular klare for bruk i ENKI
- 1 PhD

Comparative evaluation of performances of different conceptualisations of distributed HBV runoff response routines for prediction of hourly streamflow in boreal mountainous catchments

Teklu T. Hailegeorgis and Knut Alfredsen

ABSTRACT

Unidentifiability and equifinality of parameters pose challenges to calibration and prediction by conceptual precipitation-runoff models. Evaluation of prediction performances of parametrical

Teklu T. Hailegeorgis (corresponding author)
Knut Alfredsen
